

Bluestock Mutual Fund Capstone

Final Project Report

them via our Python ETL pipeline (addressing forward fills for missing weekends/holidays in NAV data), and load them into a local SQLite data warehouse for analytical querying. Data originates from mfapi.in and internal flat files. We extract 10 core CSVs, transform them via our Python ETL pipeline (addressing forward fills for missing weekends/holidays in NAV data), and load them into a local SQLite data warehouse for analytical querying. Data originates from mfapi.in and internal flat files. We extract 10 core CSVs, transform them via our Python ETL pipeline (addressing forward fills for missing weekends/holidays in NAV data), and load them into a local SQLite data warehouse for analytical querying.
